

# Amateur Radio License Classes

Amateur (HAM) radio works when all else fails. Used for local, world-wide & emergency communications, and can be used for disaster recovery & total off-grid operation. Useful in boating, hiking & camping, off-roading, and just talking around town. Students also learn the basics of electronics theory.

Our FREE Technician License Course is designed to introduce the average person to the world of Amateur (HAM) Radio. It requires no prior knowledge of radio or electronics, though you will learn some of both during the course. The class is specifically designed to give you the skills needed to pass the FCC Element 2 Exam. The Technician License comes with complete UHF and VHF privileges typically used for relatively local communication, and some limited access to the HF bands and the rest of the world.

**WHEN** Saturday February 26, 2022  
Time 1:30 pm -5pm  
**WHERE** ZOOM ONLINE  
**COST** F R E E [Students required to bring the ARRL Ham Radio License Manual - 4th Edition with them to class]

Class runs for 6 consecutive Saturdays.
